Summary

Full-stack software developer with 4+ years of experience and a First Class BSc in Computer Engineering from KNUST. Works mainly in TypeScript, React, and Next.js, with Node.js, Express, and PostgreSQL on the backend. Has shipped production systems in healthcare, fintech, and AI, including multi-portal web applications, backend APIs, and Kubernetes-based evaluation environments for AI agents.

Work Experience

Bespoke Labs

Apr 2026 – Present

RL Environment Engineer (Contract)

Remote

- Developed AI agent evaluation tasks for Nebula Aurora, a Kubernetes-based benchmark that tests frontier AI models on real DevOps and SRE incidents, with setup scripts that inject controlled failures into K3s clusters.
- Built Python graders with partial scoring that check agent responses against actual system state, plus ground-truth solution scripts for each task.
- Annotated coding-agent trajectories to produce training data for agents' research and planning ability.

Technologies used: Python, Bash, Kubernetes (K3s), Docker.

Workspace Global

May 2026 – Oct 2026

Frontend Engineer (Contract)

Remote

- Worked across all three apps of a client, operations, and talent platform through MVP delivery, and owned the client dashboard: request submission and approval, deliverables, checkout, campaigns, and meeting booking.
- Built shared features used in all three apps, including real-time chat, notifications, and auth flows.
- Contributed to the shared UI and auth packages in a pnpm/Turborepo monorepo.

Technologies used: React, TypeScript, TanStack Router/Query, Vite.

Gigsama LLC

Mar 2025 – Mar 2026

Fullstack Developer

Remote

- Built the Carex Scholar frontend across organization and staff portals, covering scheduling, check-ins, group notes, and assessments, with HIPAA access controls and audit logging.
- Led R&D on production tooling (PostHog, Sentry, Zoho Desk) and built proofs of concept for EHR and insurance billing integrations.
- Shipped backend features and fixes in the Scholar API.

Technologies used: Next.js, TypeScript, Express.js, PostgreSQL.

Hurisoft

Nov 2024 – Jul 2025

Fullstack Developer

Remote

- Built the iExchange P2P crypto trading app from scratch: trading flows, KYC, order management, dispute resolution, and the admin panel, plus its marketing site.

Technologies used: Next.js, TypeScript, Express.js, Firebase.

KNUST School of Business

Nov 2023 – Nov 2024

Fullstack Developer

Kumasi, Ghana

- Built an exam attendance system with an admin dashboard for invigilator sign-ins.
- Built a staff election system and a nomination platform with four-tier role-based access and a two-stage review workflow.

BSystems Limited

Oct 2022 – Jan 2023

Software Engineer Intern

Ghana

- Added features to the PeoplesPay admin dashboard and fixed responsive layout issues on smaller screens.

Projects

Pure Relief Spa - Booking, Store & CRM Platform

Next.js, TypeScript, Express.js, Firebase

- Built the booking engine for online and walk-in bookings, with slot locks and Firestore transactions to prevent double bookings, Paystack payments with signed webhooks, and SMS and email confirmations.
- Built the online store, loyalty points and referrals, gift cards with partial redemption, and a staff CRM covering bookings, customers, inquiries, inventory, and SMS campaigns.

NCCRM DataHub - Crisis Response Platform

Next.js, TypeScript

- Developed the frontend for Ghana's NCCRM crisis response platform, with geospatial incident tracking and an event reporting system integrated with the backend API.
- Built a situational analysis dashboard with risk assessment scoring and comparative reporting.

BisaDoctor - Chronic Care Platform

Next.js, TypeScript, Express.js, Firebase

- Built Express.js API endpoints for vitals, medications, chats, notes, and notifications that power the mobile app.
- Built a doctor portal for credential verification, an admin panel for reviewing registrations, and the marketing site.

Crypto Payment Gateway - Dashboard & Checkout

Vue 3, TypeScript

- Built the merchant dashboard for crypto transactions, payouts, commissions, API keys, and webhooks.
- Implemented a multi-chain checkout that generates deposit addresses, connects wallets via Wagmi and Viem, and tracks on-chain confirmations.

Education

Kwame Nkrumah University of Science and Technology (KNUST)

Sep 2019 – Aug 2023

Bachelor of Science in Computer Engineering, First Class Honours

CWA: 73.71/GPA: 3.70

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL.

Libraries/Frameworks: React, Next.js, Node.js, Express.js, Vue.js, React Native, Tailwind CSS.

Developer Tools: Git, Docker, Kubernetes, AWS, Prisma, Firebase.

Testing: Jest, Vitest, Playwright.

Databases: PostgreSQL, MongoDB, MySQL, SQLite.
