Summary

Full-stack Software Developer with 4+ years of experience and a BSc in Computer Engineering from KNUST. Works primarily in TypeScript, React, and Next.js, with production systems shipped across healthcare, fintech, and AI. Has delivered multi-portal web applications and backend APIs, and more recently Kubernetes-based evaluation environments for testing frontier AI models.

Work Experience

Bespoke Labs

Apr 2026 – Jul 2026

RL Environment Engineer (Contract)

Remote

- Developed AI agent evaluation tasks for Nebula Aurora, a Kubernetes-based benchmarking platform that tests frontier AI models on real-world DevOps and SRE scenarios.
- Wrote setup scripts that inject controlled failures into K3s clusters, simulating infrastructure incidents across CI/CD pipelines, service mesh configurations, and observability stacks.
- Built Python graders with partial scoring logic to assess AI agent responses against actual system state, covering incident response, platform engineering, and cloud operations tasks.
- Authored solution scripts as ground-truth references; each task had to be fully verifiable from observable system state alone.

Technologies used: Python, Bash, Kubernetes (K3s), Docker.

Gigsama LLC

Mar 2025 – Mar 2026

Fullstack Developer

Remote

- Led R&D initiatives, evaluating and implementing production tools (PostHog, Sentry, Zoho Desk) and building technical PoCs to validate EHR integrations before full implementation.
- Architected the Carex Scholar frontend across two role-based portals: an organization portal covering schedule management, scholar check-ins, group notes, and assessments; and a staff portal for organization oversight, assessment scheduling, and review workflows.
- Built automated scholar check-in, assessments, and group notes for scholar sessions, reducing administrative overhead.
- Built a proof of concept for insurance billing integration and contributed backend fixes and features to the Scholar API in Express.js and PostgreSQL.
- Maintained HIPAA compliance across the platform, including data access controls and audit logging for sensitive healthcare records.

Technologies used: Next.js, TypeScript, Express.js, PostgreSQL.

Hurisoft

Nov 2024 – July 2025

Fullstack Developer

Remote

- Developed the landing page for iExchange, a P2P cryptocurrency trading platform, with a responsive layout focused on user acquisition and conversion.
- Built the iExchange trading application, setting up the project architecture and developing core P2P trading flows, KYC verification, order management, dispute resolution, and an admin panel.
- Resolved bugs and improved frontend performance for Soccersm, a sports prediction platform, reducing load times and stabilizing key user flows.

Technologies used: Next.js, TypeScript, Express.js, Firebase.

Projects

NCCRM DataHub - Crisis Response Platform

Next.js, TypeScript

- Developed frontend for Ghana’s NCCRM crisis response platform with geospatial incident tracking.
- Built event reporting system with comprehensive data capture integrated with backend API.
- Implemented situational analysis dashboard with risk assessment scoring and comparative reporting tools for crisis management.

Crypto Payment Gateway - Dashboard & Checkout

Vue 3, TypeScript

- Built merchant dashboard in Vue 3 for monitoring crypto transactions, payouts, commissions, and configuration such as API keys and webhooks.
- Implemented checkout flow that generates deposit addresses, polls for on-chain payment confirmations via backend APIs, and updates order status on confirmation.
- Integrated wallet connectivity using Wagmi and Viem to support payments across multiple chains.

BisaDoctor - Chronic Care Platform

Next.js, TypeScript, Express.js, Firebase

- Developed the Next.js marketing site for BisaDoctor, a chronic care platform, with lead capture forms targeting patients and clinicians.
- Built Express.js API endpoints for vitals, medications, chats, notes, and notifications that power the BisaDoctor mobile app.
- Built a doctor-facing web portal for credential submission and verification, and an admin panel for reviewing doctor registrations and managing platform content.

Braszy Clothing - E-commerce Application

Next.js, TypeScript, Prisma, MongoDB

- Built full-stack e-commerce platform with user authentication and responsive storefront for browsing fashion products.
- Implemented product search and filtering, shopping cart, and order tracking.
- Integrated Stripe for secure payments and used Prisma with MongoDB for managing products, orders, and customer data.

Education

Kwame Nkrumah University of Science and Technology (KNUST)

Sep 2019 – Aug 2023

Bachelor of Science in Computer Engineering, First Class Honours

CWA: 73.71/GPA: 3.70

Academic Honours and Awards

Best Student Award, 2021

Technical Skills

- Languages:** JavaScript, TypeScript, Python, SQL, Java.
- Libraries/Frameworks:** React, Next.js, Vue.js, React Native, Express.js.
- Developer Tools:** Git, Docker, Kubernetes, AWS, Prisma, Firebase.
- Testing:** Jest, Playwright.
- Database:** PostgreSQL, MongoDB, MySQL, SQLite.
